The **main research areas** are:

Expertise you can bring in the specific topic:

Mecom GmbH, headquartered in Hamburg, Germany, specializes in the reliable and rapid transmission of all content for news agencies, ensuring that it reaches customers securely and efficiently via redundant channels, including satellite. The company's expertise lies in developing software, and creating and operating technical infrastructures tailored to the specific needs of its clients, particularly in safety-critical communication environments.

Additionally, as developer and operator of the Aggregated Modular Data System (AMDS), Mecom handles over 500 different data formats, converting them into the required format for the final recipient.

A key contribution of mecom is the development and operation of the German national warning system, Modular Warning System (MoWaS) for the federal government. This system disseminates official alerts and warnings to the public during emergencies, ensuring that vital information is distributed promptly and reliably through various channels, including cell broadcasts, all media channels, warning apps, and other alerting devices. This multi-channel approach helps guarantee that critical alerts reach as wide an audience as possible, ensuring public safety during crises.

Potential role in the project
